

## Portable articulating arm CMM –

Frequently, shipping a large and/or delicate part, fixture, tool or die proves to be an expensive or even impossible option. For these instances, using our 12' Platinum Faro Arm on-site makes perfect sense.

DMI has provided services around the globe expediently measuring objects large and small with surprising accuracy. In some circumstances, depending upon the size and fragility of the part, we could provide results at a fraction of the cost of shipping the part.

You can rest assured of a quality product by the fact that our on-site Faro CMM inspection services are ISO 17025, accredited by the A2LA (American Association for Laboratory Accreditation).

Our Faro Arm is capable of CAD-based inspection and contact scanning, using CAM2 Measure X software. CAM2 is a full-featured software, and has the functionality of the best CMM software on the market.
