

Vision system –

Our X-Centric advanced video measurement system is equipped with a 0.5 micron scale, and is capable of measuring profiles through Video Edge Detection (VED) tools and generating dimensioned part views as well as Excel spreadsheet data. This machine is also equipped with a touch probe to measure deep features, then both video and touch probe data can be correlated to the same part.

The system's software has integrated SPC functions, which provide capability indexes on each dimension measured.
